

Tilt and Turn

Good looks and secure ventilation

The way a window is designed to open is a part of its character as well as its function

Definition: A Tilt & Turn window is a sash which opens inwards in 2 ways – the whole of the window opens inwards for easy cleaning or choose to tilt the window inwards from the top to allow for secure ventilation.

This style of window is extremely popular, particularly in Scotland, and offers a combination of good looks, coupled with the practical benefits of ventilation and the ability to clean the exterior glass from indoors – especially good for use in apartments or where access to upstairs windows for cleaning is limited.

Our Tilt & Turn windows are available in a choice of bevelled or sculptured systems and a range of foiled colours.
